

Infratech offers a unique inspection program for furnaces. It effectively combines tube temperature, refractory condition, burner firing, combustion and emission analysis in order to fully assess the present operating condition for your furnace. We pioneered this technique in the late 1980's and continue to be recognized as a leader in this application.

### Benefits

- Performed with unit running, no down time required
- Carried out as a part of your PM program
- Identify problem areas prior to shutdown
- Pinpoint internal and external deposits tube issues
- See flame impingement issues before they cause damage
- See burner/flame pattern issues and efficiency problems
- See heat loss issues and plan for repairs
- Confirm effectivity of repairs
