

The Infratech Advantage

- We were the first company in Canada to offer Infrared gas leak detection
- Our staff are familiar and experienced with oil and gas production in Canada. We speak your language.
- As we pioneered this service, we have seen what works and does not work. Our results are seen and proven in the field.
- We are based in Central/Northern Alberta and are available 24/7

Gas Leak Detection

- Our GF320 cameras lets you see what you've been missing
- Portable inspection system that detects gas leaks quickly and easily
- Our qualified staff can scan your facility and identify leaks with pinpoint accuracy
- Federally and Provincially approved programs and techniques

Gas Leaks Quantification?

- QOGI now offers the ability to quantify your emissions using emission video captured during your inspection
- The portable Hi-Flow Sampler accurately measures gas leak rates
- Through Gas Leak quantification, a complete economical analysis determines the payback period of each leak, assisting maintenance and repairs
- Your leak quantification data is reported in a format that can be used to report to regulatory bodies

Compressor Seal Gas Measurement

Infratech has recently announced an improved Compressor seal gas measurement program.

- quick setup
- No min/max vent flow rates
- Flow measurement uncertainty of +/- 1 to 3%
- Continuous data logging for the duration of the test
- Detailed report available including graphing of all data points

Depending on application, the Bacharach High flow sampler is still available for seal gas testing.
